# GENIECUT
Simple. Clean. Efficient.
In-line Window Patcher

COMPETITIVE ADVANTAGE

The GENIECUT allows you to window, fold, and glue in a single pass. It integrates seamlessly with your folder-gluer, eliminating the need for a separate windowing machine, operator, and workflow. The GENIECUT is ideal for packaging producers who want to add windowed boxes to their product offering and make short-run windowed packaging profitable.
Its intuitive app requires minimal training and enables instant recipe recall. Since it uses a precision glue gun applicator instead of stencils and cylinders, setup takes minutes—not hours. And with no glue pot, there's no mess—clean-up takes only seconds.

Packaging Types: Window any substrate—folding carton, corrugated, and retention packaging.

Glue System: Compatible with a glue and inspection system from the supplier of your choice. Standard options include 6", 9", and 12" glue applicator modules.
